A FIFTH SUMMARY OF THE VERBENACEAE, AVICENNIACEAE, STILBACEAE, DICRASTYLIDACEAE, SYMPHOREMACEAE, NYCTANTHACEAE, AND ERIOCAULACEAE OF THE WORLD AS TO VALID TAXA, GEOGRAPHIC DISTRIBUTION, AND SYNONYMY

Supplement 5

Harold N. Moldenke

In 1971 I published "A Fifth Summary of the Verbenaceae, Avicenniaceae, Stilbaceae, Dicrastylidaceae, Symphoremaceae, Nyctanthaceae, and Eriocaulaceae of the World as to Valid Taxa, Geographic Distribution, and Synonymy", in 2 volumes, 974 pages. In it 20,753 names were accounted for and the known geographic distribution of the accepted 112 genera and 5146 specific and infraspecific taxa was tabulated, based on the examination of 212,210 herbarium specimens in 300 institutional and private herbaria. Since then four supplements have been published in Phytologia 23: 413--438 (1972), 25: 225--244 (1973), 26: 356--377 (1973), and 28: 425--466 (1974). Over 15,000 additional specimens have been studied since the original work. Many new taxa have come to light and many corrections of previously held specific and/or infraspecific concepts have had to be altered; 1648 new names have had to be rejected. The total number of names now accounted for, including misspellings and mis-accreditions, is now 22,650 and material has been studied from 10 additional herbaria.

Presented herewith are the additions and emendations which have come to light since the publication of the last previous supplement.

Additions & emendations to Part I: The known geographic distribution of the accepted taxa:
